DANIEL PASCUAL LÓPEZ

Software Engineer | Game Programmer

danielpascuallopez@hotmail.com | 690 769 816 | LinkedIn | Portfolio

Profile

Software Engineer focused on gameplay programming and real-time systems. Hands-on experience with C++, Unreal Engine, rendering, shaders, VFX and technical tools. Comfortable working across gameplay, UI, technical art, audio integration and level production in multidisciplinary teams.

Experience

Game Programmer **Drunken Duck Co** 07/2025 – Present
Indie game team

- Develop gameplay systems for *Underpacked!*, a cooperative game built with Unreal Engine and C++.
- Implemented features including turrets, hull breaches, respawn, player/bot animation systems and an emote wheel.
- Built UI features, procedural tube/cable systems, shaders and gameplay VFX; integrated FMOD audio.
- Contributed to level production, QA, playtesting, profiling and optimization; collaborated through Perforce/Git.

Software Development Intern **Nuevo Sentido Tecnológico Realidad Aumentada, S.L.** 01/2023 – 06/2023
Augmented reality software

- Contributed to software development projects for augmented reality, working with existing codebases and senior developers.

IT Support Intern **Universidad de Oviedo** 10/2020 – 06/2022
IT support and equipment maintenance

- Maintained and deployed computer equipment, diagnosed faults, managed inventory and supported faculty and staff.

Selected Projects

Underpacked! Unreal Engine | C++
Third-person cooperative game; completed and awaiting final Steam validation. Developed five levels and contributed gameplay systems, including turrets, hull breaches, respawn, animation features, dynamic tube/cable generation and a 3D planet level selector.
View technical breakdown and gameplay examples

Aftermath Fellows Game project
Implemented enemy and hazard AI, pathfinding, danger detection, safe-zone avoidance, gameplay interactions, VFX and custom spline/decal tools.

Lexicon Diaboli **Jamaggedon 2026** Unity | Technical Art
Created outline and dither shaders, plus a stylized VFX library featuring dissolve effects, energy spheres, portals, water and fake lights.

Technical Projects

3D Rendering Engine C++ | OpenGL
Designed a modular renderer with shader pipeline and GPU resource management.

GPU Grass Renderer Unity | Compute Shaders
Built GPU-driven procedural vegetation using compute shaders, indirect instancing, terrain data, chunk generation and culling.

Custom Animator Tool Unity
Created a visual animation graph editor with Unity GraphView and runtime state/transition playback.

Communication Library & Server C++ | Networking
Implemented TCP socket communication, a structured message protocol and client-server architecture with WebSockets.

Skills

Programming: C++, C#, Java, JavaScript, Python, Lua **Engines:** Unreal Engine, Unity, Godot
Graphics: OpenGL, HLSL/GLSL, Compute Shaders, Ray Tracing, Three.js
Tools: Git, Perforce, Jira, Jenkins **Web:** React, Node.js, WebSockets, REST, HTML/CSS, Spring

Education & Languages

Postgraduate in Videogame Development Universidad Complutense de Madrid 09/2024 – 07/2025
BSc in Software Engineering Universidad de Oviedo 09/2018 – 02/2024

Languages: Spanish (Native) | English (Fluent) | French (A2)
